

You can Help

-Contact your Local government and ask them which, if any, climate smart initiatives they are participating in.

Get involved with your local community and help start a community climate action plan.

Plant a community garden with native plants or a food forest.

Lobby your local municipality to plant native trees and bushes.

Demand more green space in your community

Climate Instability

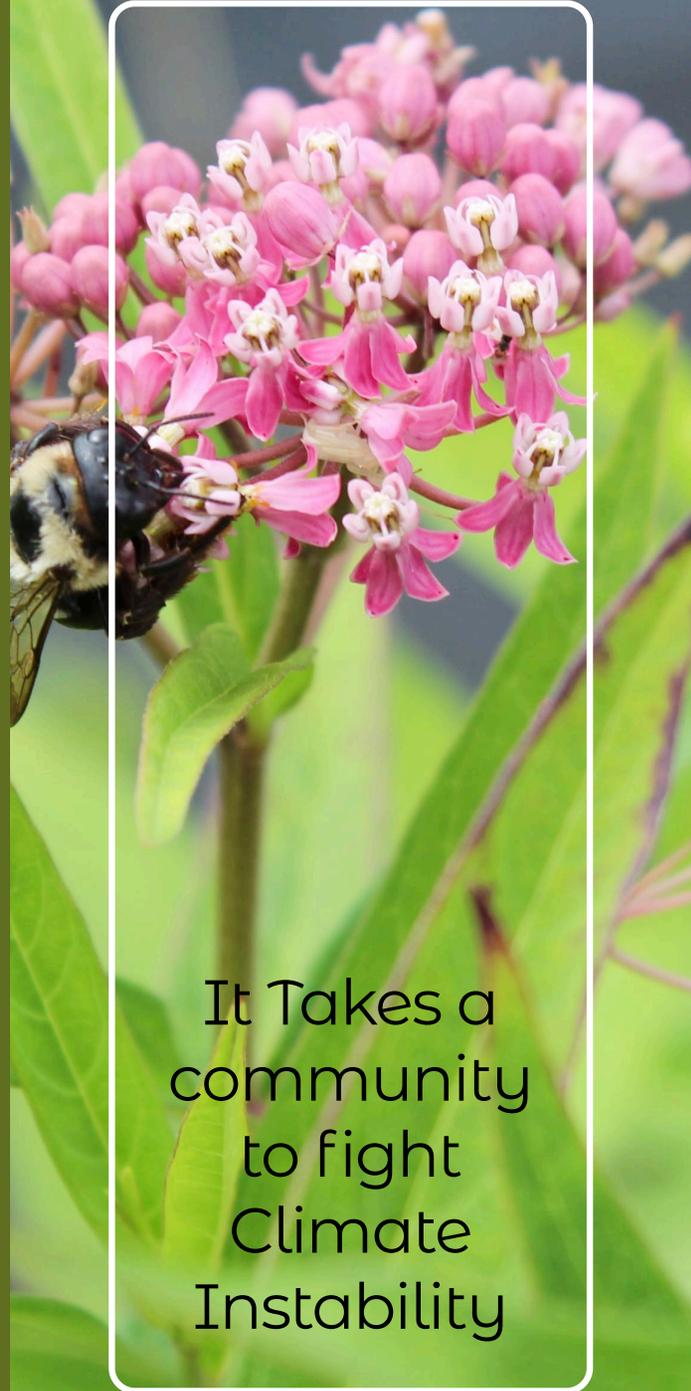

Climate change, global warming, and climate instability are what we are living with every year. Weather is changeable, week by week, season by season. Global warming means that our planet is heating up too fast, too fast. As the world heats up, weather becomes more extreme, and we face climate instability. Our weather becomes more and more extreme and inhospitable. We have time to choose common sense solutions that will help.

Native Plants Can Help

Native Plants are one way to mitigate Climate Instability. Adding native trees, bushes and perennials will also help native Pollinators!

It Takes a community to fight Climate Instability

What are climate initiatives?

Climate initiatives allow local governments to leverage resources to address climate instability

NYS Climate Smart Communities help communities reduce greenhouse gases and address climate change. Communities can apply for grants, and assistance.

Erie County has developed a climate action plan in order to work on reducing greenhouse emissions, and help Erie County communities adapt to climate instability.
